

J2 Tanning (Tanning Salon) – Lansing, MI

Quick Facts

Eagle Eye Components	Eagle Eye Bridge 310
Reason for Surveillance	Fraud protection
Locations	6
Cameras	18
Camera Type	Analog and IP
Retention	30 days

The owner of a tanning salon with six locations has dealt with liability issues in the past, including theft and injury claims. Prior to Eagle Eye Networks, this tanning salon used a DVR security system purchased from a big box store. They found it difficult to retrieve old footage, and their mobile app never updated properly.

With Eagle Eye Networks Security Camera VMS, their management team can now easily access video clips from their web browser or cell phone. They currently use a mixture of analog and IP cameras, and the Eagle Eye Bridge 310 allows them the flexibility to upgrade to all IP cameras in the future.

“We love the convenience of the Eagle Eye Networks system. One evening, after our salons were closed, a motion notification was sent to my phone. Within a few minutes, I located the footage and found someone throwing a rock through our salon window. I was able to download the clip and sent it to the police without ever leaving my home.”
