Just like any other Internet-connected device, your video surveillance cameras can be vulnerable to attack without proper cybersecurity measures in place. Eagle Eye Networks is a leader in cybersecurity, manufacturing a secure, reliable video surveillance system from the ground up.

EAGLE EYE BRIDGE/CMVR

- Cameras are isolated from the Internet, which prevents them from being attacked or compromised by hackers.
- Pre-installed Trojans are blocked from communicating with the Internet, which protects your on-site hardware.
- The Eagle Eye Cloud VMS applies a secure encryption to buffered and locally recorded video.

DVR/NVR

- Traditional DVRs/NVRs require the opening of ports, which exposes you to cyber threats.
- Hackers use open ports as a point-of-entry to gain access to corporate networks and obtain sensitive data and information.
- Compromised hardware must be manually upgraded or replaced, which is a time-consuming and expensive process.
