

Cloud Video Surveillance

Tighter Supply Chain Security With the Eagle Eye Cloud VMS

Logistics management is extremely complex work and involves overseeing all aspects of the operation, including warehousing, inventory, transportation, and supply chain processes, not to mention manpower. A modern cloud video surveillance system helps provide better protection for goods and ensures they arrive at the right destination, without incident.

Benefits of Eagle Eye Cloud VMS for the Supply Chain

The Eagle Eye Cloud VMS provides centralized management of all cameras across locations, making it easy to monitor activity from distribution warehouses to cargo trucks, so both the premises and goods are well protected.

- Prevent crimes like vandalism and break-ins
- Monitor traffic patterns in busy common areas
- Keep an eye on vulnerable areas after hours
- Receive alerts when someone enters an off-limit area or when cameras are being blocked, covered, or moved
- Footage from incidents can be easily archived, exported or shared without visiting the site
- Camera online monitoring included, receive alerts if cameras are not functioning

STRATEGIC INSIGHTS INTO WAREHOUSE OPERATIONS WITH VIDEO ANALYTICS

- **Intrusion:** Guard vulnerable areas after hours by setting parameters and tracking when someone or something enters predetermined areas.
- **Line Crossing:** Protect goods from theft and tampering with real-time alerts when someone enters a restricted area.
- **Object Counting:** Monitor the number of staff entering and exiting buildings and gain insight into cargo truck traffic flows and patterns.
- **Loitering:** Always be alerted when someone stays in one area for too long, reducing losses incurred from vandalism or break-ins.
- **Camera Tampering:** Stop crime before it happens with real-time alerts whenever a camera is moved, covered, or vandalized.
