HEALTHCARE

Cloud Video Surveillance

Better safety for patients and staff

Healthcare facilities face numerous challenges when it comes to creating a safe and welcoming environment for patients and visitors while also maintaining a high level of security. The Eagle Eye Cloud VMS is a simple, scalable, and cost-effective way to monitor for proper patient care, protect valuable assets, and ensure staff is meeting all health and safety standards.

Why healthcare faculties choose the Eagle Eye Cloud VMS

- Remote access to cameras for easier monitoring of high-risk patients and proper staff compliance, available on iOS and Android devices
- Continuous delivery of cybersecurity updates and improvements reduces demands on IT resources
- Access to live and historic video for better insight into supply management (such as drugs and PPE) and liability protection
- Monitor restricted areas with best-in-class access control integrations

Meet retention regulations at a lower cost

Video retention regulations for healthcare facilities vary depending on location and are subject to change. Healthcare facilities may also want to store video for longer than the minimum requirement as video evidence can be critical for liability protection.

With the Eagle Eye Cloud VMS, there's no need to buy and install new hardware when video retention requirements change. The Eagle Eye Cloud VMS is a true cloud video surveillance system, meaning it's simple and easy to adjust the video retention in real-time on a per camera basis, up to 20 years, right from your dashboard.
