SMART BUILDINGS

Cloud Video Surveillance

Create smarter, safer buildings

Modern, true cloud video surveillance systems provide owners, managers, and security personnel with centralized monitoring of the activity happening in their buildings so they can detect issues anywhere, at any time, before it results in liabilities. Instantly respond to and resolve incidents with Eagle Eye Cloud VMS Analytics like Line Crossing, Intrusion Detection, and Camera Tampering. Eagle Eye Cloud VMS administrators also have the option to pre-designate first responders who can receive immediate real-time security camera access during emergency situations.

Cloud video surveillance for building security

- Unlimited scalability so you can continue to expand your security solution to meet your needs

- Remote access to securely monitor facilities and public spaces in real-time from anywhere, anytime using a desktop or mobile device

- Choose new cameras from over 3,000 compatible cameras, or keep your existing analog cameras

- Advanced analytics track false alarms without having to physically inspect the location or unnecessarily dispatch law enforcement

- Flexible video storage to capture and archive video from notable events in the cloud and on-premises

Seamless security with best-in-class integrations

Smart buildings provide safer, more secure environments by creating truly integrated security solutions that seamlessly work together to deter crime and monitor daily activity at the premises. From access control to building maintenance, Eagle Eye Networks partners with best-in-class applications to pull all your security solutions into a single, intuitive interface.
