

CLOUD VIDEO SURVEILLANCE

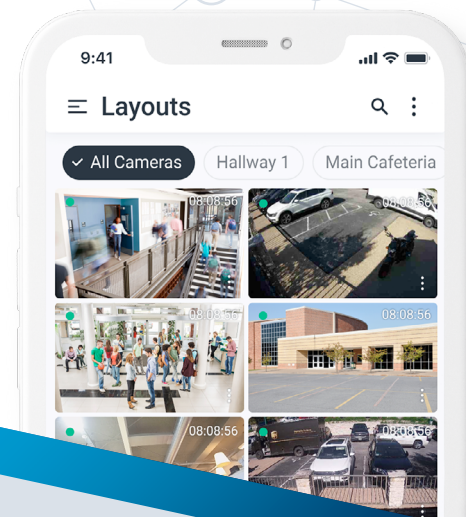

K-12 School Solution

Centralized Cloud Video Surveillance for K-12 Schools

K-12 school campus security is constantly evolving with new technology, new safety concerns, and added requirements and regulations. Video surveillance is a critical component of campus security, and advancements in true cloud technology equipped with artificial intelligence allow schools to improve their overall security with simplified solutions that free up their resources to focus on education.

Create a better learning environment for students, faculty, and staff

- Manage multiple cameras, locations, and users from a single interface with centralized video management.
- Remote viewing of encrypted video for 100% mobile and web browser viewing that's fully secure.
- Improve emergency response time by pre-designating first responders who receive real-time security camera access.
- Scalability at a flexible price point with over 3,000 compatible cameras.
- Security that meets your budget with flexible monthly or yearly payment plans.
- Advanced analytics that provide insight into events so security personnel can find quick resolutions.

Smart Video Search

Save time and immediately find the surveillance video you need. Search your surveillance video the same way you search the web to find specific people, vehicles, or objects.

Have a report of suspicious activity from a student in a red sweatshirt with a backpack? Immediately identify all instances captured on surveillance. Concerned about a blue Ford sedan? See when the vehicle was on campus.

Real-Time Access for First Responders

In emergency situations, it's critical for school administration to be able to respond to and work quickly with first responders. Eagle Eye Cloud VMS administrators have the option to pre-designate first responders who can receive immediate real-time security camera access during emergency situations. The cameras are shared only when an authorized user activates first responder access. The authorized user has the option to highlight specific cameras making it easier for first responders to gain insight into the exact situation.
