

CLOUD VIDEO SURVEILLANCE

Self Storage Facilities

Smart cloud surveillance for self storage

The storage industry builds its name on safeguarding its customers' assets. Smart, AI-powered video surveillance systems that improve facility security and operations are now more practical than ever. Minimize liability and loss, strengthen security, and streamline operations while reducing costs with Eagle Eye Networks.

The Eagle Eye Cloud VMS (Video Management System) provides storage facility owners and managers remote access to all cameras and locations, proactive alerts, audio communication, and simplified video search capabilities all from a single, easy to use platform.

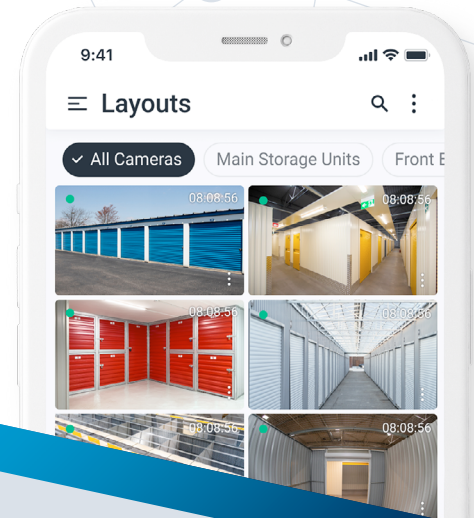

Cost-effective security

Eagle Eye Networks is the only VMS that allows you to choose the security camera that is best for your needs or upgrade your system without replacing existing cameras and infrastructure. Integrate a loud speaker to remotely warn suspicious individuals to deter trespassing, vandalism, and theft.

Get the most out of your security cameras while ensuring safety and security with reliable, advanced cloud surveillance.

The AI difference for self storage

- **Affordable remote video monitoring:** Eagle Eye AI Filtering makes remote monitoring an affordable option for self-storage facilities. AI eliminates 90% of motion-based false positive alarms, ensuring that dispatchers are only reviewing real human or vehicle activities. This can dramatically lower costs when the facility is charged for each event.
- **Better awareness with proactive alerts:** Smart alarms turn existing cameras into proactive security monitors. Using analytics and AI, the Eagle Eye Cloud VMS provides automatic alerts when a perimeter has been breached, people are loitering, when cameras are obscured, and when people are present at times they should not be.
- **Reduce investigation time:** Instantly find the surveillance video you need with AI-powered Eagle Eye Smart Video Search. Easily search for specific people (man in red sweatshirt), vehicles (blue Toyota), and objects (black backpack) across all system cameras and locations to quickly find and review reported incidents.
- **Gate security and automatic entry:** Eagle Eye LPR (license plate recognition) turns existing security cameras into accurate license plate readers. Confidently track all vehicles entering and exiting the property, prevent gate damage, and catch tailgaters. Automate gates for long-term customers.

The Eagle Eye Cloud VMS benefits

- Remote access to all cameras and locations from any device
- Continuous system updates keep system up to date with latest features
- Easy to find, view, download, and share video from any camera without visiting the site
- System flexibility makes it easy to add new cameras or locations or adjust retention
- Industry-leading cybersecurity protects your network
- Bandwidth Management means no need for additional on-site data
- Customer peace of mind through shared video of the facility and their unit remotely
