

PROACTIVE SECURITY REDEFINED

# ElectricEye + Eagle Eye integration

## Introduction

ElectricEye augments the Eagle Eye Cloud VMS by layering AI-driven behavioral intelligence on top of traditional video feeds. This integration empowers businesses with intelligent, real-time threat detection, dramatically reducing false alarms while improving situational awareness.

With ElectricEye, users gain instant access to advanced behavioral insights from any connected camera — anywhere in the world. The platform delivers seamless deployment, intuitive self-monitoring, and automated decision support, ensuring faster responses, greater reliability, and smarter protection.

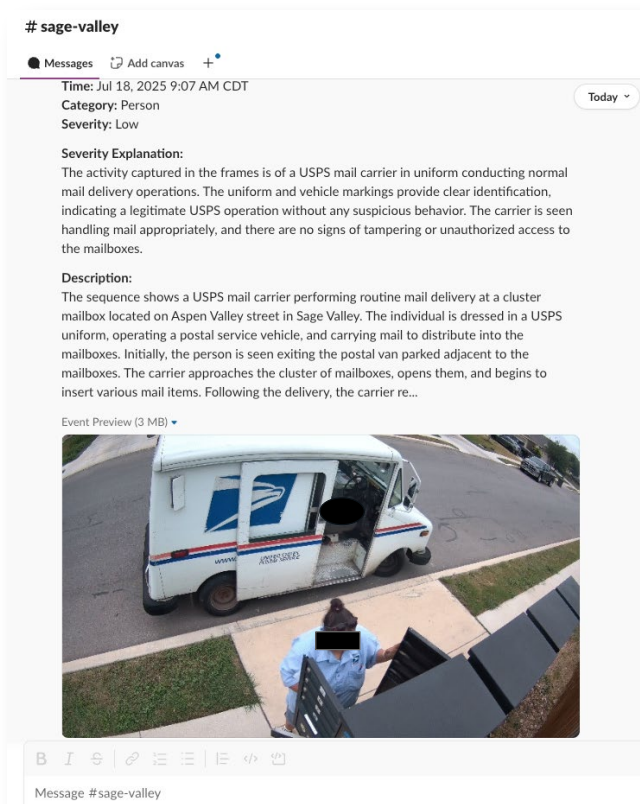

## Advanced behavioral analysis

Integration with the Eagle Eye Cloud VMS offers easy device onboarding and seamless enablement of cutting-edge AI analytics. Utilizing webhooks for real-time person and vehicle detection, ElectricEye's software analyzes video clips further to provide behavioral analysis. This capability distinguishes between normal activity (a person getting their mail) and genuine threats (a break-in attempt), significantly reducing the noise from basic detections. This leads to fewer false alarms and more actionable insights.

## Advantages of integration

ElectricEye's integration enables increased efficiency in time and cost for security monitoring. Managed services and solutions benefit from:

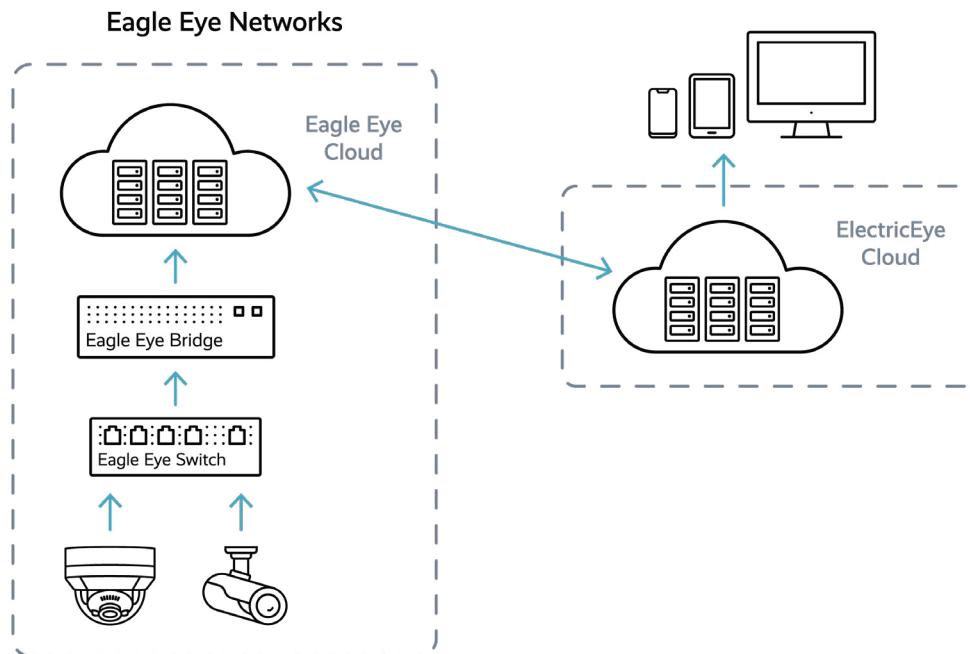

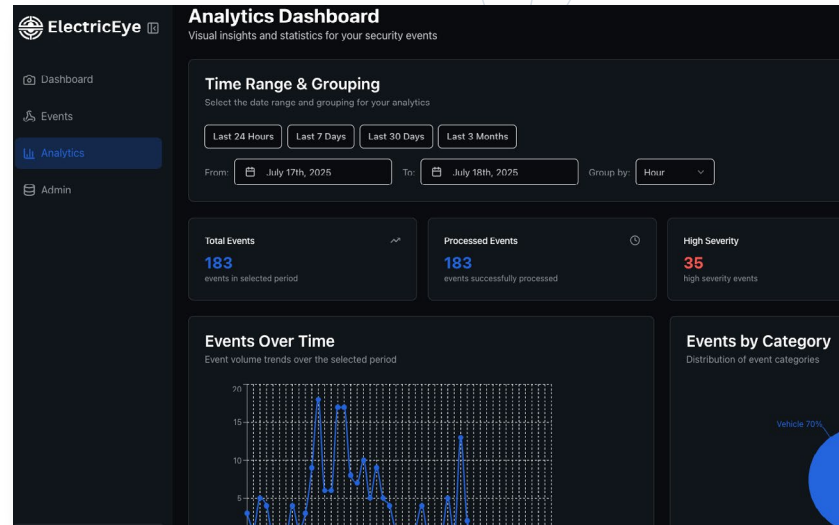

- ElectricEye's Behavioral Intelligence works seamlessly with your existing Eagle Eye setup.
- Focused on specific behaviors indicative of theft or unauthorized access, such as mailbox theft, by identifying suspicious actions beyond simple presence detection.
- By providing granular behavioral analysis, the system significantly reduces the overwhelming number of false positives, making monitoring more effective and less frustrating.

## Benefits

Take advantage of the flexibility and security that ElectricEye provides:

- Reduce costs with efficient monitoring and fewer false alarms.
- Increase efficiency and save time by receiving only highly relevant alerts.
- Robust security allows for encrypted video and data transmission.
- Address specific, real-world security challenges like mail theft or perimeter breaches by analyzing behavior, not just presence.
- Ensure systems run optimally with user notifications that guide users to upgrade resources when needed.

## Availability

ElectricEye's integration is available for deployment with compatible Eagle Eye Cloud VMS setups (Bridges, CMVRs, or Camera Direct).

Please discuss the range of integration possibilities and specific needs with your Eagle Eye representative.
