

Templeton USD enhances campus security with a new Eagle Eye camera system

“This system is beyond amazing! On behalf of Templeton High School, we are so grateful to be partnering with you. We are thrilled to have significantly enhanced our ability to monitor our campuses and ensure student safety.”

Kristin Dentone, Assistant Principal at Templeton High School

INDUSTRY:

Education

LOCATIONS:

Templeton, California, 4 Schools (K-12)

SOLUTION:

- 47 new cameras across four school sites
- Eagle Eye Health Monitoring
- Future-ready infrastructure for Eagle Eye 911 Camera Sharing

PARTNERSHIP:

Stone IT Solutions

On the central coast of California, rural Templeton Unified School District (TUSD) serves 2,350 students (TK-12). TUSD provides a robust enrichment program, including technology, engineering, art, music, mock trial, athletics, and Future Farmers of America programs.

The challenge: Addressing security system reliability and performance gaps

Templeton USD faced significant operational challenges with their previous security camera system. The district had initially implemented their previous system to monitor their four campuses, but over time, the performance and reliability degraded.

Beyond the failure of hardware, Templeton USD experienced the frustration of a "platform-locked" system. With fewer than half of the installed cameras operational and critical issues like frequent disconnections and failures to recover, the district felt held hostage by a system that not only failed to provide reliable security but also restricted their options for repair or replacement.

This "hostage-as-a-service" situation severely compromised their ability to maintain a secure and monitored environment, a particularly alarming reality given the increasing demands for campus safety and real-time incident response.

The solution: Reliable coverage, simplified management, and emergency integration

Recognizing Templeton USD's need for a robust security upgrade, Eagle Eye Networks Sell-With team connected them with a trusted local reseller. Stone IT Solutions and Eagle Eye proposed a comprehensive solution designed to provide reliable coverage, simplified management, and scalable integration with emergency services.

Key elements of the proposed solution

- Installation of 47 new cameras across the four school sites
- Ongoing support to ensure maximum system uptime and fast response to hardware issues
- Future-ready infrastructure to enable Eagle Eye 911 Camera Sharing, improving coordination with local emergency responders

Key implementation details

- Eagle Eye and Stone IT Solutions worked closely with Templeton USD to map out blind spots and coverage gaps in their existing setup.
- The team addressed the most critical security needs, which allowed the district to upgrade its infrastructure with minimal disruption.
- Eagle Eye provides active monitoring tools and system health checks, eliminating the persistent issues experienced with the previous solution.

The results: 100% reliable coverage and enhanced safety across all campuses

- 100% coverage across all school campuses with reliable, high-resolution cameras
- 24/7 active camera monitoring eliminated downtime and reliability issues that plagued the former system.
- Improved safety posture with real-time access and future 911 Camera Sharing integration
- Positive feedback from school administrators and facilities teams regarding usability, responsiveness, and clarity of footage
- Local support from Stone IT Solutions ensures coverage is always available

What's next: Continuing commitment to safety

Templeton USD is continuing to work with Stone IT Solutions and Eagle Eye on the integration of Eagle Eye 911 Camera Sharing, which will allow emergency responders to gain live access to campus feeds during critical incidents.

"This integration will give students, staff, and parents ease of mind knowing that critical moments are monitored in real time," said the Director of Safety and Security, "building greater trust and confidence within the school and wider community that we are doing everything possible to protect our own." This next phase demonstrates the district's ongoing commitment to student safety and responsive emergency management.
