

## Let AI watch for the things that matter to your customers.

Help your customer put their cameras to work beyond security, watching for specific things that matter to their business. Eeva is an AI Video Agent that keeps an eye on anything, creating custom analytics in minutes and watching for those specific events 24/7.

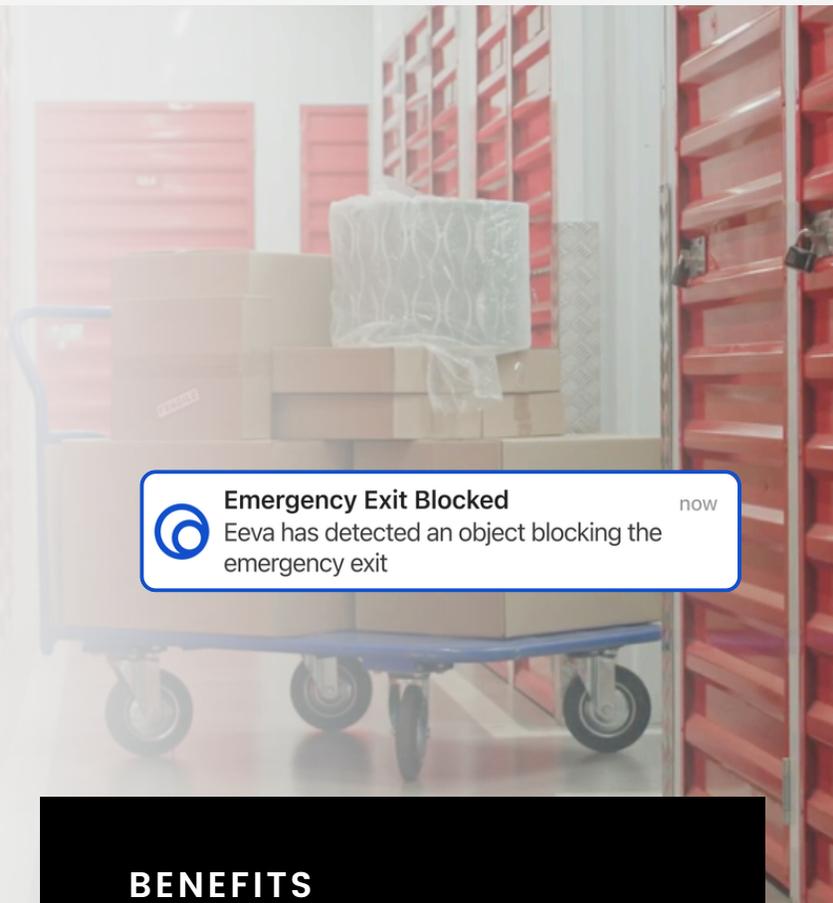

Using simple instructions, users can define complex scenarios, and Eeva will automatically build the logic to detect these events and trigger alerts and automations within the Brivo Eagle Eye VMS.

Eeva empowers your customers to define what matters to their businesses in plain language, so Eeva can detect and react to events in real time. It provides actionable, context-aware intelligence that enhances safety and operational efficiency without the traditional complexity of AI deployment.

## Build custom video analytics in minutes — no coding or AI expertise required.

Most AI features are built for a broad audience; building custom analytics and automations takes time, money, and a team of developers. Eeva changes all that.

Now you can offer custom AI that can improve the bottom line for every one of your customers. Build prompts as a service or show them how to build their own. Eeva understands natural language and no special coding or training is required.

## BENEFITS

- **Watch for anything, all the time** - Create a prompt for any scenario and Eeva will start watching immediately.
- **Save time** - Build prompts in minutes; Eeva is a pre-trained AI to reduce testing and deployment time.
- **Easy to use** - Use natural language prompts; no coding or technical AI experience needed.
- **High accuracy** - Eeva uses context-aware reasoning to process context and spatial relationships.
- **Seamless automation** - Native integration into Brivo Security Suite enables real-time alerts and automations.
- **Works with any camera** - The Brivo Eagle Eye VMS is camera agnostic; no additional hardware is required.

## Use cases

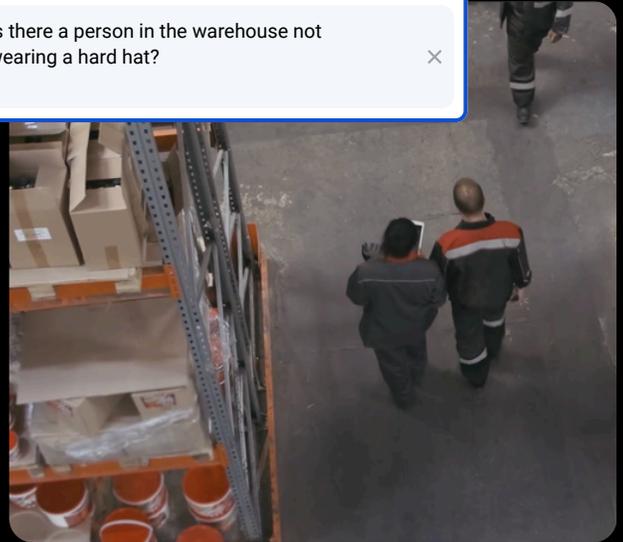

Eeva revolutionizes the way users interact with the Brivo Eagle Eye VMS. Create a prompt using natural language, just like you do in an LLM chat, and you'll start getting alerts. What used to take weeks or months can happen in minutes.

Set up alerts and automations for anything:

- Mattresses and other restricted items in the trash
- Spills on the floor in need of cleanup
- Lack of inventory or empty shelves
- Safety and compliance protocols not followed
- Workers not wearing protective equipment
- Employees not following set procedures

What should Eeva look for?

Is there a person in the warehouse not wearing a hard hat?

## Infinite possibilities for a low monthly fee

Eeva is available as a cloud analytic subscription add-on in the Brivo Eagle Eye VMS. A tiered pricing model determines the cost per camera based on the complexity and frequency of the search prompt. No hardware is required.
